

“DSA builds the team, gets its members comfortable in their environment, lifts them to think strategically and enables them to take some outstanding and leading edge decisions, setting totally owned action plans that are making the business better every time. We’re now taking their approach to every project to ensure we deliver our customers the best service first time, every time.”

**Alex Vaughan,
Managing Director
Costain Community**

Project team improvement

DSA has been enhancing people and team performance in the construction industry since 2000. All of our coaches come from within the industry – ensuring we are *totally focussed on construction*.

We work with groups of people thrown together to build a project – we help build the team, the team builds the project.

Through our Strong**Start2**Finish™ process we help project boards and teams agree common goals, develop their success strategy and implementation plans. Our 90 day workshops enable the team to appreciate progress and re focus for the next 90 days. These workshops are repeated all the way to project completion and the realisation of the team’s goals. A project close out workshop ensures lessons lead to change and that essential practices and behaviours are adopted on the next project.

Emphasis is on accelerated team development, rapid conflict resolution and strengthening relationships and practice for current and future projects.
